NAME

praliases – display system mail aliases

SYNOPSIS

praliases [**–C** *file*] [**–f** *file*] [*key ...*]

DESCRIPTION

The **praliases** utility displays the current system aliases, one per line, in no particular order. The special internal @:@ alias will be displayed if present.

The options are as follows:

–C Read the specified sendmail configuration file instead of the default **sendmail** configuration file.

–f Read the specified file instead of the configured **sendmail** system aliases file(s).

If one or more keys are specified on the command line, only entries which match those keys are displayed.

The **praliases** utility exits 0 on success, and >0 if an error occurs.

FILES

/etc/mail/sendmail.cf The default **sendmail** configuration file.
